SEO / GEO / AEO Audit Report

FULL AUDIT

SEO	GEO	AEO
7	6	7
On Track	*On Track*	*On Track*

17 October 2026

Claude Skill and Plugin by Alex Labat

Executive Summary

imamadvokat.bg is a Bulgarian marketplace for finding a lawyer and booking a consultation. The technical base is real: server-rendered HTML, canonicals, a 380-URL sitemap, hreflang, and unusually good schema on lawyer profiles and on the three online-service guides. Those service guides, especially company registration and the euro capital conversion due 31 December 2026, are the pages an AI engine can cite.

The directory underneath is a template. All 53 city and practice hubs have titles longer than 65 characters. Fifteen cities with no local supply repeat the same “online consultation” lawyer block. Contact publishes no phone, email, or address, while the terms identify a different legal name — “Нужда От Адвокат” ООД, ЕИК 207735435, ул. “Сияйна” 4, р-н Витоша. One blog post still has the placeholder meta description “Описание”.

The highest-leverage work is to make city pages either unique or unindexed, to connect the brand to the legal entity in public and in schema, and to put a short direct answer plus FAQ schema on the practice pages that should win snippets.

Dimension	Score	Status	Key takeaway
SEO	**7/10**	**On Track**	Titles, thin city pages, and one placeholder meta description hold back an otherwise solid technical base.
GEO	**6/10**	**On Track**	Founder bios and citable facts exist, but the legal entity, contact details, and named authors are hard for an AI engine to trust.
AEO	**7/10**	**On Track**	FAQ schema and question headings are real. The pages that should win “адвокат в [град]” snippets still do not answer the question.
Combined	**20/30**		Decent foundation with a clear split: service guides and profiles are ahead of the city directory.

Scores use a 1–10 scale. 8–10 is strong, 5–7 is a decent foundation with specific gaps, and 1–4 is a critical failure. This audit reads the HTML Google and AI crawlers receive. It does not measure Core Web Vitals, backlinks, or live rankings. For speed, run the homepage and a profile URL at pagespeed.web.dev. For authority, use a backlink index such as Ahrefs or Google Search Console.

Pages Audited

The sitemap lists 380 URLs (Bulgarian and English). This audit fetched every Bulgarian directory hub, city+practice page, lawyer profile, and blog post — 185 URLs — plus the editorial templates, both FAQ sets, the English homepage, about, and blog index, robots.txt, and the sitemap. English city and profile mirrors were not fetched a second time; they follow the same

template with hreflang back to Bulgarian. Terms were read only to identify the legal entity. Login and account pages were skipped.

Inventory below: 206 fetched URLs. Word counts include navigation and footer, so a city hub near 240 words has almost no unique copy.

URL	Page type	Notes
/	Homepage	Title 46 chars. Organization + WebSite schema. One testimonial. About 544 words.
/en	Homepage (EN)	Translated shell. og:site_name remains Имам адвокат. Same schema as BG.
/about	About	484 words. No schema. Explains the product, not the legal entity.
/en/about	About (EN)	Translated about page. No schema.
/team	Team	932 words. Four named founders. No Person schema.
/contact	Contact	72 words. Form only. No phone, email, or address.
/faq	FAQ	485 words. FAQPage schema. Question H2s.
/en/faq	FAQ (EN)	Translated FAQ with FAQPage schema.
/faq/specialists	FAQ for lawyers	625 words. FAQPage schema. hreflang points at /en/faq/specialists.
/en/faq/specialists	FAQ for lawyers (EN)	HTTP 200, but this URL is missing from sitemap.xml.
/specialist/join	Lawyer signup	878 words. Title 69 / description 210. H1 has a stray space before the period. No schema.
/ai	AI assistant	519 words. Product page for connecting Claude/ChatGPT. No schema.
/uslugi	Services index	238 words. ItemList schema lists two services; three exist.
/uslugi/registratsiya-na-firma	Service	1,494 words. Service, FAQPage, ItemList, BreadcrumbList. Title 55 chars.
/uslugi/prevalutirane-na-kapitala	Service	1,925 words. Deadline 31 Dec 2026. Title 80 chars. FAQPage + Service.
/uslugi/promyana-v-obstoyatelstvata	Service	458 words. Short FAQ (two questions). Title 84 chars.
/blog	Blog index	12 posts. ItemList schema. Titles are the article H2s.
/en/blog	Blog index (EN)	English chrome, Bulgarian article titles. Not a translation.

URL	Page type	Notes
/s/obshti-usloviya	Terms	Legal name and address live here. Meta description is the contract text.
/robots.txt	Robots	Allow: /. Disallow: /api/. Sitemap declared.
/sitemap.xml	Sitemap	HTTP 200. 380 URLs. lastmod on 218. hreflang alternates included.
/llms.txt	AI guide	404. llms-full.txt is also 404.

SEO Analysis

Score: 7/10 — On Track. The crawl and schema layer is ahead of the on-page copy.

Technical On-Page

Signal	Finding	Status
Title tag	Homepage title “Имам адвокат – Намери добър адвокат в България” is 46 characters and matches the query. Every one of the 53 city and practice hubs exceeds 65 characters (Sofia is 73, family law is 75). Profile titles have a median of 88 and a maximum of 146. The DSA blog title is 201 characters. These will truncate in search results.	Needs Attention
Meta description	The homepage description is 148 characters and includes a booking CTA. Join-page description is 210 characters. The terms description is the opening clause of the contract. The post “Правни отношения с адвокат...” uses the placeholder “Описание” (8 characters) for both the meta description and og:description.	Needs Attention
Heading hierarchy	Fetched pages have a single H1. City H1s follow “Намери добър адвокат в {град}”, including the ungrammatical “в Варна”, “в Видин”, “в Враца”, and “в Велико Търново”. The join H1 is “Нови клиенти намират вас .” with a stray space. On /advokati/nakazatelno-pravo, one lawyer’s H2 includes a bar number, phone, email, and website.	Needs Attention
URL structure	Slugs are short and readable: /advokati/sofia, /advokati/sofia/semejno-pravo, /uslugi/registratsiya-na-firma, and dated-topic blog slugs. Profile URLs add a short public id, which is appropriate for duplicate names.	Good
Canonical tag	Sampled editorial, service, directory, blog, and profile pages use a self-referencing canonical. English pages canonical to themselves and hreflang back to Bulgarian.	Good
Robots meta	No noindex on content URLs. robots.txt allows everything except /api/ and declares the sitemap. /404 returns HTTP 404. A self-canonical on that 404 is harmless as long as the status stays 404.	Good
Viewport	The viewport meta is present (width=device-width, initial-scale=1, viewport-fit=cover).	Good
Image alt text	The logo and homepage illustrations have descriptive alt text. Decorative SVGs correctly use empty alt with aria-hidden. The registration page has 13 empty alts and the join page has 7, beyond the decorative set.	Needs Attention
Internal links	Footer, breadcrumbs, and hub blocks use real anchors: city names, practice names, and service names. The footer city list is shorter than the sitemap city list, so many city URLs are only reachable from the directory and the sitemap.	Good
Open Graph and Twitter	og:title, og:description, og:url, og:locale, og:image, and twitter:card=summary_large_image are present. Templates checked share /og-share.png. BlogPosting schema points at a specific image on contents.imamadvokat.bg, which the social tags do not use.	Needs Attention

Content Quality

Signal	Finding	Status
Word count	Service guides are substantial (1,494 and 1,925 words). All 12 blog posts fall between 915 and 1,853 words. Profiles have a median of 720 words, with 9 under 400 and a low of 210. City hubs such as Силистра (238), Кърджали (240), and Враца (242) are navigation plus a single lawyer card.	Needs Attention
Keyword signals	Titles and H1s target “адвокат в {град}” and “адвокат по {област}”. The homepage lists practice areas and everyday case types (развод, наследство, НАП, КАТ). Combo pages such as /advokati/sofia/semejno-pravo target the city-plus-practice query, but only Sofia has them.	Good
Freshness	Blog posts show dates in 2026 (for example 23.08.2026 on the EOOD guide). Sitemap lastmod is present on 218 of 380 URLs, including profiles updated in October 2026. Static hubs often have no lastmod.	Good
Readability	Service pages and FAQs are scannable, with short sections. Directory hubs are a filter plus cards and almost no explanation. The divorce article contains typos (“спрамо”, “в най-често”) that a citing engine will repeat.	Needs Attention
Duplicate templates	Fifteen city pages share the heading “Адвокати с онлайн консултация”, six booking cards, and about 497 words: Велико Търново, Видин, Кюстендил, Плевен, Перник, Ловеч, Разград, Самоков, Русе, Смолян, Търговище, Елин Пелин, Шумен, Ямбол, Ябланица. That is the same page with the city name swapped.	Needs Attention

Structured Data

Signal	Finding	Status
Schema coverage	Homepage: Organization and WebSite. FAQs: FAQPage. Services: Service, Offer (on two of three), FAQPage, ItemList, BreadcrumbList. All 12 posts: BlogPosting. Profiles: Person, Attorney, PostalAddress, GeoCoordinates. Directory hubs: ItemList and BreadcrumbList.	Good
Schema completeness	WebSite has no SearchAction. Organization has no legalName, taxID, address, or contactPoint. sameAs lists a Facebook profile id and Instagram, and omits the LinkedIn company URL in the footer. The /uslugi ItemList names two services; “Промяна в обстоятелствата” is missing from that list.	Needs Attention
Schema not used	No HowTo on step-by-step guides, no SpeakableSpecification, no AggregateRating, no Person schema on /team, and no Article author that is independent of the brand. About, contact, join, and the AI page have no JSON-LD at all.	Missing
Validity	JSON-LD on the sampled pages parsed. FAQ questions in the markup match the visible H2s on /faq. Profile telephone is in the schema even when the visible card emphasizes booking.	Good

GEO Analysis

Score: 6/10 — On Track. GEO is how ChatGPT, Perplexity, Gemini, and Google AI Overviews decide whether to cite a page. They prefer a clear entity, a named expert, and a sentence they can quote without editing.

E-E-A-T Assessment

Signal	Finding	Status
Author information	The team page names four co-founders and gives Димитър Георгиев a specific background: CEO, 17 years in business and law, former legal assistant and in-house counsel, and ten years running a children's kitchen business. Blog bylines are usually "ImamAdvokat" or "imamadvokat.bg", typed in schema as a Person. The juvenile-punishment post is the exception: д-р Десислава Андреева, доктор по наказателно право.	Needs Attention
About page	/about (484 words) explains search, reviews, booking, and an AI assistant. It does not say who owns the platform. The English about page is a real translation.	Needs Attention
Contact information	/contact is a form with the labels Име, Имейл, Телефон, and Съобщение — 72 words and no published NAP. The terms state the operator: "Нужда От Адвокат" ООД, ЕИК 207735435, седалище р-н Витоша, ул. "Сияйна" 4, represented by Димитър Георгиев and Мирослав Андреев.	Missing
Trust signals	The homepage has one quote, from Райна Игнатова, Дизайнер. Profiles show rating counts, including many zeros (Ивелина Гюрова shows 0 оценки). There is no bar-association, award, or press block for the platform.	Needs Attention
Organization schema	The brand is declared (name, alternateName "Imam Advokat", url, logo, two sameAs links). The legal name, UIC, address, and managers are not in the graph, so the brand and the company remain two entities.	Needs Attention

Content for AI Synthesis

Signal	Finding	Status
Factual density	The euro-capital and EOOD pages are quotable: who must convert, the 31 December 2026 deadline, state fee 28.12 EUR, minimum capital 1 euro, and what the Registry Agency does automatically. City hubs contain almost no local facts (court, typical fee, how many lawyers).	Needs Attention
Clear claims	The homepage H1 and the first paragraph state the offer: find a lawyer by city and practice area and book a consultation. The definition under "Какво е ImamAdvokat?" is plain enough to quote.	Good

Signal	Finding	Status
Source citation	Guides explain procedures in the site's own words. They rarely name the statute article, the Търговски регистър, or another primary source a model can cross-check. The terms and the team bios are the main first-party evidence.	Needs Attention
Comprehensiveness	Registration and euro conversion answer the practical questions a founder asks. A city page does not answer how to choose, what a consultation costs, or whether online booking is available in that city — except by showing cards.	Needs Attention
Entity clarity	Titles consistently end in "| Имам адвокат". English pages say "Imam Advokat" while og:site_name on /en stays "Имам адвокат". The legal entity name is different again. An assistant can easily describe three names for one company.	Needs Attention
Originality	The euro-conversion explainer and the on-page capital calculator are distinctive. The 15 online-fallback city pages are not: same six lawyers, same length, city token swapped. AI systems tend to drop near-duplicates.	Needs Attention

Technical GEO

Signal	Finding	Status
Structured data depth	Attorney plus geo coordinates on profiles is stronger than a typical directory. There is no dedicated author, dataset, or speakable type, and the brand-as-Person pattern on posts weakens the author entity.	Needs Attention
HTTPS and security	The site is HTTPS on Cloudflare with strict-transport-security max-age=31536000 and includeSubDomains.	Good
Crawlability	robots.txt does not block content. The sitemap is valid XML (a generic fetcher once returned 500; a normal request returned 200 and a urlset of 380). Content is in the initial HTML, not behind a client render. /llms.txt and /llms-full.txt do not exist.	Needs Attention
sameAs and hreflang	Schema sameAs points at a numeric Facebook profile and Instagram. The footer also links linkedin.com/company/imamadvokat-bg, which is the stronger entity URL and is missing from schema. hreflang is implemented, but /en/blog is not an English article set.	Needs Attention

AEO Analysis

Score: 7/10 — On Track. AEO is how a page becomes the featured snippet, a People Also Ask box, or a spoken answer. The FAQ and service templates are built for that. The directory template is not.

Featured Snippet Eligibility

Signal	Finding	Status
Direct answer paragraphs	FAQ answers sit under question H2s, which is the right shape. Many run well past 40–60 words before the point is finished, so a snippet may grab a long clause. City and practice H1s are followed by cards, not by a direct answer.	Needs Attention
Definition patterns	“Какво е ImamAdvokat?” and the blog H2 “Какво е ЕООД?” use a definition sentence. That is the pattern voice search and featured snippets extract.	Good
List content	The EOOD article uses numbered H3 steps (name, activity, capital, documents, filing, registration). Service pages use “Как става стъпка по стъпка”. Homepage case types are a list of topics, not a list of steps.	Good
Table content	No comparison table was found for ЕООД versus ООД, fee versus state fee, or city coverage. The euro page discusses rounding problems in prose, which a table would make extractable.	Missing

Structured Answer Formats

Signal	Finding	Status
FAQ schema	FAQPage is present on /faq, /en/faq, /faq/specialists, and all three service URLs, and the questions match the visible headings. It is absent on blog posts that already ask questions, and absent on all 53 hubs and 15 Sofia combo pages.	Needs Attention
HowTo schema	Step sections are marked up as ordinary headings inside BlogPosting or Service, not as HowTo. The extraction path for “how do I register an EOOD” is weaker than the content deserves.	Missing
Question-phrased headings	FAQ H2s and many blog H2s are natural questions (“Колко струва регистрацията на ЕООД през 2026 г.?”). Directory H1s are keyword phrases, which is fine for classic SEO and weak for snippets.	Needs Attention
Speakable schema	No SpeakableSpecification was found. Voice assistants have no hint which paragraph is the spoken answer.	Missing

Voice Search Readiness

Signal	Finding	Status
Conversational language	FAQ copy speaks to the reader (“Как да избера подходящ адвокат?”). Homepage case blurbs are a single line plus an arrow to a practice area (“Развод и издръжка на деца → Семейно право”), which is a label, not an answer.	Needs Attention

Signal	Finding	Status
Long-tail coverage	Service FAQs cover specific questions: dormant companies and euro conversion, a foreign owner, a non-cash contribution, several changes in one filing. City pages do not answer “колко струва адвокат в Пловдив” or “има ли адвокат по семейно право във Видин”.	Needs Attention
Local signals	Profiles carry city, address schema, and coordinates, which is the right local layer. The platform itself has no public NAP. Fifteen city URLs answer a local query with lawyers from other cities under an online-consultation heading.	Needs Attention

Priority Recommendations

Ordered by what will change how the site is crawled, cited, and shown in results. Effort is relative to this codebase: Low is a template or meta fix, Medium is copy plus schema, High is new unique content across many URLs.

Priority	Issue	Dimension	Effort	Impact
Critical	Fifteen city URLs (Видин, Русе, Плевен, Перник, Шумен, Ямбол, and others) repeat an “Адвокати с онлайн консултация” block at about 497 words. Treat them as local pages only when local lawyers and unique copy exist; otherwise noindex or consolidate them.	SEO	High	High
Critical	Put the legal entity on Contact, About, and the footer, and in Organization schema: “Нужда От Адвокат” ООД, ЕИК 207735435, ул. “Сияйна” 4, р-н Витоша, plus a phone, an email, and LinkedIn. Today that identity appears in the terms, not where clients or crawlers look.	GEO	Medium	High
High	Shorten titles that run past roughly 60–65 characters. Every one of the 53 city and practice hubs is over 65. Profile titles have a median of 88 (max 146). The DSA blog title is 201 characters.	SEO	Medium	High
High	Add an 80–150 word unique introduction and a 3–5 question FAQ, with FAQPage schema, on practice hubs and the 15 Sofia city+practice pages. Open each answer with 40–60 words.	AEO	High	High
High	Bylines should name a lawyer or expert, with credentials, and BlogPosting author should match. The brand can stay the publisher. One post already does this (д-р Десислава Андреева). Most say ImamAdvokat.	GEO	Medium	High
Quick Win	Replace the meta description “Описание” on /blog/pravni-otnosheniya-s-advokat-kakvo-da-ochakvate-i-kak-da-se-podgotvite. It is an 8-character placeholder in both the meta description and og:description.	SEO	Low	High

Priority	Issue	Dimension	Effort	Impact
Quick Win	Add a SearchAction to the homepage WebSite schema so the on-page search can qualify for a sitelinks search box.	SEO	Low	Medium
Quick Win	Mark the EOOD step-by-step article and the service “how it works” sections with HowTo schema. The steps are already in the HTML.	AEO	Low	Medium
Quick Win	Fix the template grammar (“във Варна”, “във Видин”, “във Враца”, “във Велико Търново”), the join-page H1 “Нови клиенти намират вас .”, and the criminal-law hub H2 that dumps a bar number, phone, and email into the heading.	SEO	Low	Medium
Medium	The English blog index lists Bulgarian headlines. Either translate the posts or stop declaring an English hreflang for untranslated content. Add /en/faq/specialists to the sitemap.	SEO	Medium	Medium
Medium	Publish /llms.txt with a one-paragraph description of the company and links to the FAQ, the three service guides, and the team page.	GEO	Low	Medium
Medium	Add Person schema for the four founders. Keep AggregateRating for profiles that have real reviews, and replace the single homepage quote with attributable client reviews.	GEO	Medium	Medium

What's Working Well

These are already in the HTML. Keep them while the gaps above are fixed.

Server-rendered HTML	Pages return full content in the first HTML response (Next.js, x-nextjs-cache HIT). AI crawlers are not blocked by a client-only render. HTTPS and HSTS (one year, includeSubDomains) are in place.
Crawl controls	robots.txt allows the site, blocks only /api/, and declares the sitemap. sitemap.xml returned HTTP 200 with 380 URLs and hreflang alternates. Content pages use self-referencing canonicals. The missing-page URL returns a real HTTP 404.
Lawyer profiles as entities	104 profile URLs were fetched. They expose Person, Attorney, PostalAddress, and GeoCoordinates, including telephone. That is the right schema for a lawyer directory and it is applied across the template.
Service guides worth citing	/uslugi/prevalutirane-na-kapitala (1,925 words) and /uslugi/registratsiya-na-firma (1,494 words) state specific facts: the 31 December 2026 deadline, a 28.12 EUR state fee, and a 1 euro minimum capital. Both carry Service, FAQPage, BreadcrumbList, and a lawyer ItemList.
Blog baseline	All 12 posts are 915–1,853 words, show a date, and use BlogPosting with a Person author and an image on contents.imamadvokat.bg. Several H2s are already phrased as questions.

FAQ pages that match the schema	/faq and /faq/specialists use question H2s, and the FAQPage JSON-LD repeats those questions. The English FAQ is actually translated.
Named team	/team introduces Димитър Георгиев, Мирослав Андреев, Станислав Богданов, and Делчо Тодоров in first person. The terms name Георгиев and Андреев as managers, so the people and the company can be tied together once the schema says so.
URL and breadcrumb design	Slugs are readable (/advokati/sofia/semejno-pravo, /uslugi/registratsiya-na-firma). Directory and service templates emit BreadcrumbList.

Glossary

SEO

Search Engine Optimization is the work of being crawled, understood, and ranked in classic results such as Google and Bing. On this site that means titles, descriptions, headings, canonicals, the sitemap, internal links, and structured data.

GEO

Generative Engine Optimization is the work of being quoted by AI answer engines such as ChatGPT, Perplexity, Gemini, and Google AI Overviews. Those systems prefer a named organization, a named author, and a specific fact they can repeat. A page that only lists profile cards gives them little to cite.

AEO

Answer Engine Optimization is the work of winning the short answer: a featured snippet, a People Also Ask box, or a spoken reply. The usual pattern is a question heading, a 40–60 word answer immediately under it, and FAQ or HowTo schema that repeats that answer.

Audit date: 17 October 2026. Source: publicly rendered HTML of imamadvokat.bg, robots.txt, and sitemap.xml.
